To complete this kit, I used the 4mm lator punch needle and I set it so that 3 holes were showing above the handle. To make the fringe I used the longest setting which means no holes were showing above the handle. If you're using a different punch needle you can use a setting you like although I wouldn't do loops longer than about 1cm/0.5 inch because you might run out of yarn.

- (1) Thread your punch needle with the mustard yellow yarn and punch according to the basics instructions you've downloaded.
 - (2) Keep the same setting and continue with the other colors.
 - (3) Once you finish with the blue yarn we'll move on to the fringe. Change your punch needle setting to the longest loop (no holes showing above the handle). Punch the fringe according to [this video](#). When you punch hold the loops on the other side so that they stay as long as you want. Hold until you punch again to prevent previous loops from coming undone. Once all punched, snip the ends and straighten out. You'll punch about 3 lines like shown below.
- turn the piece over and take a look at the piece as a whole. Snip ends and beginnings of your stitches. Are there any stitches that are much longer than the rest? If so, snip them just like you would when ending a stitch and mix them in with surrounding stitches so they're not as obvious.
 - straighten out the outline by moving stitches around. Detailed video is [here](#).

step back and enjoy the awesomeness you just created and be proud of yourself!

I cannot wait to start getting pictures from all of you to see your beautiful work. Don't forget, I'm only a message away should you have questions ;)
